

Software Development

Connect IT's history is rooted in our focus on software development. Sourcing skilled Software Engineers is a key part of our service offering and has been an invaluable benefit to our clients. Our team of experienced Consultants, based in our Head office, cover Java (J2EE, J2SE, J2ME) C, VC++, C++ (including embedded) .Net, C#, ASP.NET, Sharepoint, PHP, LAMP, Perl, Database Development / Administration and Web design / development.

.Net

From the initial release of the .Net framework, Connect IT has been building relationships within the Microsoft community. With the OO focus that we already had it was a straightforward and successful diversification for us. We now have over 4,000 .Net Developers (C# ASP.net VB.net) on our database. We are seeing real growth in this area as many of our Java focused clients are now utilising .Net technologies

Java

Over the last 10 years we have built an enviable Java candidate database and a detailed network of the best engineers within the Java technology space. We have over 6,000 Java professionals on our database with a very strong technical awareness in this area covering J2SE, J2EE and J2ME. We have recruited ex-Java Programmers as Consultants and all of our staff that work in this area undergo training in basic Java fundamentals.

C / C++ / Embedded

Connect IT has established itself as one of the UK's leading recruiters in the realtime embedded software space. With a database of over 4,000 candidates we have a significant source of high calibre Engineers. We have a strong technical awareness and have a detailed knowledge of these languages and how they are utilised. We recognise the difference between commercial application development and lower level system engineering.

Architecture

The strong technical awareness that has supported the expansion of Connect IT has enabled us to establish a large network of respected Technical Architects. With 2,500 professionals on our database, we cover all aspects of Architecture, Application, Integration, Data, Security, Infrastructure and Enterprise.

Connect IT has worked at the very top of the Enterprise Architecture field and has successfully sourced Chief Architects on some of the world's biggest projects.

We are members of various communities focused around technical architecture (TOGAF, Agile) and take our role in this sector very seriously. We have a detailed appreciation of the role of a Technical Architect and an excellent reputation in this area.
